

LARGEST ELECTRICAL CONTRACTOR IMPLEMENTS ORACLE ADF (APPLICATION DEVELOPMENT FRAMEWORK)

A leading electrical contractor implements a control center dashboard using Oracle ADF and UX (user experience) technologies.

ABOUT THE CLIENT

The client is one of the largest electrical contractors leveraging innovative solutions to help their clients.

NSIGHT ADVANTAGE

Enable clients to obtain actionable business information for effective decision-making.

Expertise in a comprehensive suite of Oracle solutions.

Best-in-class IT services, solutions, and resources for organizations seeking Oracle solutions.

Highly experienced and certified Oracle professionals.

CHALLENGES

- The current solution was not scalable to meet the client's needs. It was highly complex to add additional customizations to meet short-term and long-term business requirements.
- Using a third-party party application caused higher TCO, cost redundancies and integration issues.
- The third-party application did not integrate well with their current system.

SOLUTION

- Business process and design, solution development, testing, final activities for a successful go-live, and post-production support.
- Implemented Proof-of-Concept (POC) showcased ADF capabilities.
- Leveraged the Oracle ADF and UX technology to rebuild a 'Control Center' Dashboard.
- Delivered an innovative solution to integrate their business process and Oracle Universal Content Management system to manage clients' business content.

BUSINESS BENEFITS

- Fast-paced development to meet the client's business requirements and demands without compromising the quality of the solution.
- Implemented several new features with the core solution.
- User-friendly, interactive UI with device compatibility (responsive UI) and easy to use interface for their business users.
- Robust, high-performing, and easy to maintenance application.
