

FROM ON-PREMISES COMPLEXITY TO REAL-TIME PROJECT FINANCIALS

How a major U.S.
construction and
electrical leader unified
finance and project
operations on **Oracle
Fusion Cloud**.

THE TRANSFORMATION

A leading U.S. construction and electrical organization needed to modernize its enterprise core. Facing limited visibility and fragmented processes across finance and project operations, leadership executed a strategic migration from Oracle On-Premises to Oracle Fusion Cloud to accelerate scalability, governance, and reporting.

CHALLENGE

FINANCIAL VISIBILITY GAPS

Limited real-time line-of-sight into project costs, margins and cash flow created forecasting friction and delayed strategic decision-making.

FRAGILE RECONCILIATIONS

Manual, error-prone integrations and reconciliations created operational friction and increased the burden on finance and IT teams.

MISSION-CRITICAL CONTINUITY

Operating in essential utility services meant any system downtime could directly impact **operational continuity and end customers**.

SOLUTION

UNIFIED FINANCIAL CORE

Deployed **Oracle Fusion Cloud Projects & Finance** as a unified platform connecting financial and project operations.

ORCHESTRATED INTEGRATION

Engineered **OIC-based integrations** connecting Concur, Inspyrus and third-party systems to streamline data flows and reduce operational silos.

REAL-TIME ANALYTICS

Enabled **OTBI analytics, BIP statutory reporting and Oracle APEX dashboards and workflows** to deliver real-time operational intelligence and tailored project workflows.

BUSINESS OUTCOMES

FROM CLOUD MIGRATION TO OPERATIONAL ADVANTAGE

FINANCIAL VISIBILITY

GREATER CONTROL

Moved from fragmented reporting to real-time visibility across project costs, margins, and cash flow, supporting faster, more informed decisions.

COST EFFICIENCY

LOWER TCO

Reduced over-provisioning and shifted infrastructure costs from fixed to variable expenditure, maximizing capital agility.

CLOUD SCALABILITY

MODERNIZATION READY

InUnified the technology foundation across IaaS, PaaS, and Oracle Fusion pathways, creating greater flexibility for future modernization.

OPERATIONAL EFFICIENCY

AUTOMATION

Automated standard IT operations and workflows, freeing teams to redirect capacity toward higher-value initiatives.

The transformation moved the client beyond infrastructure modernization - creating a more connected, efficient and scalable operating foundation for continued growth

THE NSIGHT ADVANTAGE

Deep Technical Authority. Dedicated Human Partnership.

For complex, project-driven organizations, cloud transformation requires more than technical execution -it demands a partner who stays invested in operational stability, adoption and long-term value

Oracle Ecosystem Mastery

Deep expertise across **Fusion Applications, OCI, OIC, OTBI and APEX**, to execute secure, low-risk migrations.

Business-Aligned Architecture

Solutions engineered directly around project operations, financial governance, and industry-specific realities.

Integration-Led Transformation

Unifying core platforms and legacy third-party tools into a single operational view.

End-to-End Execution

Single-partner accountability spanning **architecture, implementation, integration, reporting and ongoing support**
